Art Unit: 1712

1. Applicants' election dated 9/8/06 has been received. Upon a review of the art, particularly the teachings in Morse et al. '438, it does not appear that an election of species was necessary. The Examiner apologizes for this unintentional delay in prosecution.

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1 to 53 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-46 of U.S. Patent No. 6,670,438. Although the conflicting claims are not identical, they are not patentably distinct from each other because the non-silicon metalloid-oxane and metallo-oxane or mixed poly (silicon/metallo)oxane polymer prepared by the instant claims is embraced by the dioxane, oligo-oxane or polyoxane product claimed in 6,670,438. The alkoxides and catalysts used in the method claimed are the same as that used in the method of '438. See for instance dependent claims 2 to 6 and 26 to 53 as they correspond to claims 2 to 43 in '438.

Art Unit: 1712

4. Claims 7 - 13 and 16 - 24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 7:

This claim is confusing because the list of compounds in (a) and (b) include many compounds that are not alkoxides.

Claims 8 to 11:

This claim is confusing because it does not appear that claim 7 allows for the presence of organosilicon alkoxides. Note that the first compound in (a) of claim 7 specifies a non-silicon metalloid alkoxide.

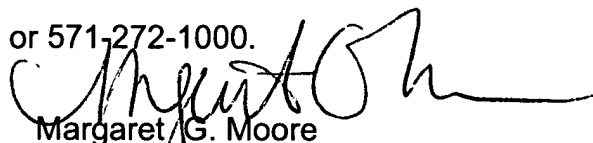

5. The instant claims are neither taught nor suggested by the prior art. Please note that the claims contain language that was previously held to be patentable over the prior art. Specifically, the claims contain the requirement that the catalyst comprise a molecule having a nucleophilic group that displaces alkanol, facilitating solvolysis, to initiate structure directed condensation.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Margaret G. Moore whose telephone number is 571-272-1090. The examiner can normally be reached on Monday to Wednesday and Friday, 10am to 4pm.
